# FRIDGiGUARD™

FridgiGuard Quick Install Guide

Ver. 1

1 Determine the width of your refrigerator's seal.

NOTE: If your door is more than 0.5mm (0.02 in.) greater than its cabinet side, you will need to add a shim to the lock to bring it within 0.5mm (0.02 in.).

**2** Thoroughly clean the area where the FridgiGuard will be placed.

**3** Place the Installation Jig along refrigerator opening. (Double-sided tape required).

**4** Remove your FridgiGuard device from its packaging.

5   Before applying adhesive, set aside an area on the catch where lock and catch meet by applying masking tape.

6   The catch side's covered length should be the same as your refrigerator's seal minus 1mm (0.04 inch).

Taped area

7   Prepare an industrial-grade adhesive for the back of your FridgiGuard.

Example

8   Once you've covered this area, place an even layer of adhesive on the remaining portion of your lock and catch.

Glue areas

9   Place FridgiGuard onto the Installation Jig. Press the firmly on the device and hold per adhesive manufacturer recommendations.

10   Once FridgiGuard is secure in place, remove the Installation Jig.

11   Connect FridgiGuard to its power supply.

12   Your FridgiGuard is ready to be programmed. To learn about authorization, records, and other functions, refer to the **FridgiGuard Software Guide**.

13   Once programmed, unlock the device via keycard and remove any masking tape.
